INNOVATIONS FOR
SUPERIOR EQUINE NUTRITION

PERFORM GOLD • SENIOR GOLD

12.5% Protein, 12% Fat, 15% Fiber
1,800 KCAL/lb.

14.5% Protein, 12.5% Fat, 18% Fiber
1,800 KCAL/lb.

ELECTROLYTE
BALANCE

Increased Dietary Cation – Anion Difference (DCAD)

- Guaranteed levels of Sodium & Chloride
- Helps improve heat tolerance; applies to hotter temperatures, as well as heat generated from physical exercise, which may increase stamina
- Helps reduce chances of developing anhydrosis (non-sweater)
- Helps improve muscle function, thereby reducing issues with muscle soreness

HIGHER
FAT

Added fat from Soy Oil, Rice Bran and Flaxseed

- Additional calories to meet the needs of high level performance horses and hard keepers
- Helps improve coat and hoof condition
- Provides essential fatty acids (Omega-3 and Omega-6) and helps with the absorption of fat soluble vitamins A, D, E and K
- Source of "cool calories" that may lead to calmer disposition

WHEY
PROTEIN

Optimal Amino Acid Balance

- Expanded amino acids guarantees to include Leucine
- Helps stimulate protein synthesis for a strong top line
- Balanced amino acid ratios can improve physiological efficiency since the body will not have to use energy to excrete extra amino acids not used in protein synthesis

GASTRIC
BUFFERING

Enhanced Gastric Support

- A seaweed-derived calcium source
- Helps reduce the incidence or severity of gastric ulcers
- Helps improve bone density
- Promotes an overall calming effect on horses
- Helps reduce joint inflammation
